

随堂练习

(1) $T = \frac{2\pi}{\Omega_1} \Rightarrow \Omega_2 = \frac{2\pi}{T} = \Omega_1$, $\hat{x}_a(j\Omega) = \sum \hat{x}_a(j\Omega - jk\Omega_1)$, $k \in \mathbb{Z}$

$-2\Omega_1 < -\Omega_2 \Rightarrow \Omega_1 > \frac{1}{2}\Omega_2$

$\Omega_2 - 2\Omega_1 < \Omega_1 - \Omega_2 \Rightarrow 3\Omega_1 > 2\Omega_2 \Rightarrow \Omega_1 > \frac{2}{3}\Omega_2$

b part 左移 $2\Omega_1$ 和 a part 右移 Ω_1 不能重合

∴ B

(2) ~~$\Omega_2 = \Omega_1$~~

P27. 15.

$$x_a(t) = 3\sin(100\pi t), \quad T = \frac{2\pi}{100\pi} = 20\text{ms}.$$

(b) $x(n) = x_a(nT) = 3\sin(100\pi nT)$

$$x(n) = x(n+h') = 3\sin(100\pi nT + 100\pi n'T) \quad T = 200^{-1} \therefore \frac{100\pi n'}{200} = 2\pi k$$

$$\Rightarrow n' = 6 \text{ 最小} \therefore x(n) = x(n+6)$$

$$T' = 6T \Rightarrow f' = \frac{1}{6T} = 50\text{Hz}$$

(c) $n = 6T/T = 6$ 个

(d) $x(n) = 3\sin(100\pi n/F_s) \quad \frac{100\pi n}{F_s} = \frac{\pi}{2} + \pi k \Rightarrow F_s = \frac{200n}{2k+1} \in \mathbb{Z}^+$

$$F_s \geq F_{s \text{ min}}, \quad n=1, \quad 100 = 4 \times 25, \quad 2k+1=25 \Rightarrow k=12$$

$$F_s = 8\text{Hz}$$

如果要能重建 $2\pi F_s \geq 200\pi \Rightarrow F_s \geq 100 \therefore F_s = 200\text{Hz}$

P27. 1.7

(a) $f_N = 10 \text{ kHz}$, $f_s \geq 2f_N = 20 \text{ kHz}$

(b) $f_s < 2f_1$ \therefore 会混叠, 无法唯一重建.

~~f_s~~ $\omega_s = 16\pi \text{ k rad/s}$ $\omega_1 = 10\pi \text{ k rad/s}$

(c) 同理. $1 \text{ k} \sim 9 \text{ k}$ 混叠.

P27. 1.8

(1) $2\omega_n = 2 \times 2\pi f = 400\pi \text{ rad/s}$ 为 n 率

(2) $f_{\max} = \frac{1}{2} f_s = 125 \text{ Hz}$. 仅有可能. 也可能不可以 ($f_{\max} < \frac{1}{2} f_s$)

P27. 1.9.

(a) $\omega_{max} = 720\pi \text{ rad/s}$, $\omega_v = \omega_{max} \Rightarrow 2\omega_v = 1440\pi \text{ rad/s}$ 与 $n\frac{\pi}{2}$.

(b) $f = \frac{1}{2} f_s = 300 \text{ Hz}$

(c) ~~ω_{max}~~ $= (1200 - 720)\pi \sim 720\pi \text{ rad/s}$ 的谐波.

$\sin(480\pi t)$ 可以采到, $\sin(720\pi t)$ 变成 $\sin(480\pi t)$.

$x(n) = \sin(0.8\pi n) + 3\sin(1.2\pi n) = \sin(0.8\pi n) - 3\sin(0.8\pi n) = -2\sin(0.8\pi n)$

$n' = 5$, $T' = nT = \frac{1}{20} \text{ s}$, $\omega' = \frac{2\pi}{T'} = \frac{240\pi}{1} \text{ rad/s}$

(d) $y_d(t) = x(f_s t) = -2\sin(480\pi t)$

3/1.

$\mathcal{F}[f(t)\cos(50t)] = F(j\omega) * \pi[\delta(\omega+50) + \delta(\omega-50)] = \pi[F(j(\omega+50)) + F(j(\omega-50))]$

$\omega_s' = \omega_s + 50 = 100 + 50 = 150 \text{ rad/s}$, $\omega_{fs} = \omega_{s'} = 2\omega_s' = 300 \text{ rad/s}$.

3/2.

(1) $f_{s \min} = 2f_{\max} = 2 \times 10^4 \text{ Hz}$, $T_{\max} = 10^{-4} \text{ s}$

(2) $\omega = \frac{1}{2} \omega_s = \frac{1}{2} 2\pi f_s = 10^4 \pi \text{ rad/s}$

3/3. $x(t) : f_m = 300 \text{ Hz}$, $y(t) : f_m = 300 \text{ Hz}$

~~$2 \times f_{mx}$~~

(1) $f = 2f_m = 600 \text{ Hz}$ (2) $F(j\omega) = 2\mathcal{F}(\frac{1}{2}x(t)) = 2X(j\omega)$, $f = 2f_m$

(3) $F(j\omega) = \frac{1}{2}Y(\frac{1}{2}j\omega)$, $f = 2 \times \frac{1}{2} f_{mx} = 100 \text{ Hz}$. $f = 2 \times 2 f_m = 1200 \text{ Hz}$

(4) $F(j\omega) = \frac{1}{2\pi} [X(j\omega) * 3Y(3j\omega)] = \frac{3}{2\pi} \int_{-\omega_x}^{\omega_x} X(j\omega) \cdot Y(j\omega - 3j\omega) d\omega$

ω 最大为 $\frac{1}{3}\omega_y + \omega_x$, $f = 2 \times (\frac{1}{3} f_m + f_m) = 400 \text{ Hz}$
